

SERIES 26

When engineering makes the difference

Broad range

Various designs, materials, lengths, and process connections for every application.

One sensor for any medium

From dry to liquid
From fluffy to sticky

Circular electrode design

A larger sensing area enables reliable detection even with buildup.

Scale 1:1

Up to
85 %
improved
measurement
performance

vs. M30 Sensor

**Capacitive
Sensor**

Article number: KA0642

**RECHNER
SENSORS**

TYPICAL APPLICATIONS:

Level control of

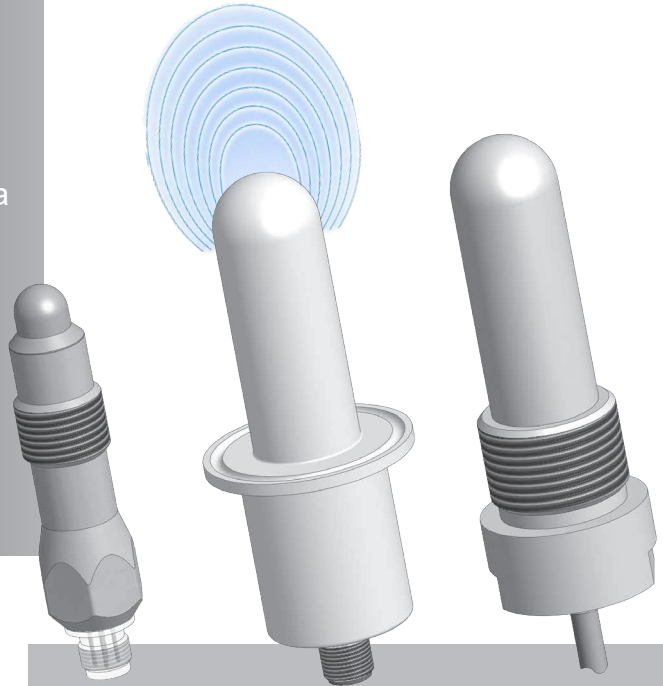

- difficult-to-detect media
- different media a single setting
- highly adhesive media

and ideal for WHG-overfill protection

WHY ELECTRODE SHAPE MATTERS?

The sensor's specially engineered electrode shape delivers up to 85% better measurement performance compared to an M30 sensor.
